PROFESSIONAL SUMMARY

Backend Engineer with 2 years of professional experience, currently building **Java 21 / Spring Boot 3** services for **Axis Max Life Insurance's** digital onboarding platform: migrated **15+ insurance products** to a new premium-calculation engine and integrated **20+ external systems**. Hands-on with **AWS (DynamoDB, S3, Secrets Manager)**, **Redis** caching and PII-secure API design. Built **SalaryLens**, an AI platform serving repeat queries **90x faster**.

PROFESSIONAL EXPERIENCE

INADEV | Associate Software Engineer (Backend)

Jun 2025 – Present

Client: Axis Max Life Insurance | Digital Onboarding Platform for Life Insurance (ULIP, Pension, Term, Savings)

Tech: Java 21, Spring Boot 3.3, OpenFeign, AWS (DynamoDB, S3, Secrets Manager, SES), Redis, Drools, MapStruct, Jenkins, GitLab

- Migrated **15+ insurance products** onto a new **premium-calculation engine**, owning contract mapping, benefit illustration flows and product-variant rules, with a backward-compatible rollout and **zero production regressions**.
- Built and consumed REST APIs for **20+ third-party integrations** via **OpenFeign** (PayU, Paytm, TechProcess e-Mandate, eKYC, dedupe, credit bureau, CRM) with retry, fallback and graceful degradation.
- Delivered config-driven features on a **DynamoDB single-table configuration store** (GST rates, funds, rate-change dates, product/rider and pincode masters) via composite-key AWS SDK lookups, and moved fund content from **Strapi CMS to S3-backed JSON** (incl. /nfo-fund-benefits API), so monthly fund launches ship without code releases.
- Extended a **two-tier cache (Caffeine + Redis)**: 22 config datasets preloaded in-JVM at startup and 30-day-TTL Redis caching of premium-rate lookups, sparing the slowest downstream call; added Redis caching for NFO fund config and fixed cross-environment eviction, so config updates apply without pod restarts.
- Developed onboarding journeys on a **1,600+ file multi-module Spring Boot platform**, including **NRI and GIFT City (IFSC)** international flows with multi-currency and FX-rate handling.
- Hardened PII-sensitive flows with **AES encryption, SHA-256 hashing and field-level masking**, remediated **SBOM / Defect Dojo** vulnerabilities, and built server-to-server analytics events carrying hashed PII for privacy compliance.
- Created a personal toolkit of **8 AI coding agents on Kiro and Claude Code** with scoped write permissions and safety guardrails, automating monthly configuration updates, merge-conflict resolution and codebase navigation.
- Debugged production-critical defects across DEV/QA/UAT/PROD and managed monthly release-branch merges.

Tech Mahindra | Operations Associate (Tech-enabled Role)

Sep 2024 – Jun 2025

- Automated reporting and reconciliation workflows with **Python and SQL**; supported API testing and release validation.

PROJECTS

SalaryLens | AI-Powered Salary Negotiation Platform

Jun 2026 – Jul 2026

LLM-generated salary analysis and negotiation scripts for the Indian job market | github.com/adarsh251010/salarylens

Tech: Java 17, Spring Boot, Spring Security, PostgreSQL, Redis, OpenAI API, React 19, Tailwind CSS, Docker (multi-stage), Render

- Re-architected a blocking **28s OpenAI call** into an **asynchronous job pipeline** using **CompletableFuture** and a thread-safe **ConcurrentHashMap** job store, returning a job ID in **500ms** while the React client polls for live progress.
- Added a **Redis caching layer** (Spring @Cacheable, composite key on job title, location and experience, 1-hour TTL), serving repeat queries in **314ms vs 28s (nearly 90x faster)** and cutting OpenAI token cost.
- Secured **12 REST endpoints** with stateless **JWT authentication** (custom OncePerRequestFilter, HS256, BCrypt) and prevented **IDOR / broken object-level authorization** by scoping every async job and query to its owner.

TECHNICAL SKILLS

Languages:	Java 21 (Collections, Multithreading, Streams & Lambdas), SQL, JavaScript (React), Python
Backend:	Spring Boot 3, Spring MVC, Spring Security, Spring Data JPA, Spring Data Redis, Spring Cloud OpenFeign, Spring Retry, Hibernate, MapStruct, Drools, Microservices
Cloud & Data:	AWS (DynamoDB, S3, Secrets Manager, SES), NoSQL, PostgreSQL, MySQL, Redis (Redisson), Caffeine
Security:	JWT, BCrypt, AES/SHA-256, PII Masking, OWASP Input Validation, SBOM / Defect Dojo
DevOps & Tools:	Docker, Jenkins, GitLab CI/CD, Git, Maven, SonarQube, JUnit 5, Postman, JIRA, Agile/Scrum
AI Tooling:	Claude Code, Kiro (custom agents), OpenAI API, LLM Integration, AI-Assisted Development
Domain:	Life Insurance / BFSI, Premium Calculation, Payments & e-Mandate, eKYC, Credit Bureau, GIFT City

EDUCATION

Master of Computer Applications (MCA) | Chandigarh University

2024

Data Science Program | Masai School

2025
